Experience

MERN Stack Developer, Techeezy—Lahore, PK

August 2025 – Present

- Owned and delivered a production-grade **multi-tenant billing system** supporting subscription management, proration, trials, and revenue sharing.
- Architected **monetization infrastructure** enabling platform users to generate revenue via **Stripe Connect Express** accounts.
- Engineered **scalable infrastructure** modules (Mongo, SQL, S3) provisioned dynamically based on subscription tier.
- Developed **MongoDB Admin GUI** allowing users to manage **provisioned databases** based on subscription tier.
- Designed and implemented an **S3-compatible storage API** enabling external access to user buckets.
- Built full-featured SQL Admin panel using **Knex.js**, supporting: **Table/column** CRUD operations, **Row-level** data manipulation, **Raw SQL query** execution interface

Software Development Engineer, Freedom – Los Angeles, USA

January 2023 – February 2025

- Improved backend performance for an internal client tool by profiling slow **Express.js** APIs and implementing **Redis caching**, reducing average API response time by **45%**.
- Designed and implemented a real-time in-app **notification system** using **Socket.IO (Node.js)** and **Vue.js**, increasing user interaction by **20%** through instant feedback on key events.
- Optimized front-end performance by implementing **lazy loading**, **image compression**, and **background image preloading**, resulting in a **40% decrease in initial page load times**.
- Refactored and normalized a **MySQL database schema**, eliminating redundant data and improving query speed, which led to a **35% reduction in data redundancy** and more maintainable structure.
- Streamlined developer onboarding by creating a **setup guide** and a **Bash script** to automate environment configuration, reducing onboarding time by **over 50%**.
- Managed the **staging environment**, ensuring smooth deployment and testing of new features before release.

Junior Web developer, Plotano – Lahore, PK

May 2022 – January 2023

- Built a real-time, online multiplayer game (**Wordfall**) from scratch using **HTML**, **CSS**, **JavaScript**, **Pixi.js**, and **Socket.IO** for real-time communication.
- Developed game mechanics including word typing, score multipliers, life system, and a live leaderboard tracking top player stats.
- Solved real-time synchronization issues and race conditions by refactoring backend logic to ensure accurate scoring across simultaneous user actions.
- Improved UX by designing a **dynamic loading screen** that cached assets efficiently and provided visual feedback during startup.

Education

Virtual University of Pakistan – Bachelors in Computer science

2021-2025

Punjab group of colleges— FSC in Pre-engineering

2021-2021

Skills

Languages/Frameworks: JavaScript, TypeScript, React JS, Next.js, Vue.js, Node.js, Nest JS, MySQL, MongoDB, Knex JS, Prisma ORM, Drizzle ORM

Architecture: Stripe, Webhooks & Idempotency Handling, Payment Lifecycle Management, SaaS Billing Architecture, Multi-tenant System Design, Event-driven Architecture

Tools/Technologies: Git, GitHub, VS Code, Docker, AWS, Linux, Slack, YouTrack, Trello
